Role: Sustainable Engineering Lead

Location: Altrincham

Type: Permanent

Background

In January 2014 slicedbread launched one of the most innovative technology applications the legal market had ever seen. This technology is a product called, sharedo, an adaptive case and matter management product. Since then we have delivered sharedo into a number of the UK's largest law firms and are growing rapidly as a result of this. Our aspirations do not stop at legal however and we believe there is a significant opportunity to grow a "Great British Technology" company through the delivery of a pure play SaaS case management solution.

As we move towards a pure play SaaS model a key part of our customer success strategy is the establishment of our sustainable engineering team. We are looking for a talented engineer to join us on that journey and help establish and shape that team.

The Role

If you're passionate about technology, and are a true problem solver then keep reading.

We're looking for someone that eats, drinks and sleeps technology. Someone who has full-stack experience in Microsoft products and is open to continuing to learn and further their knowledge. That said, we also want someone who understands that there is life beyond the keyboard. If you want to work with smart people, using interesting & bleeding edge technology, enjoy a lively debate without egos or corporate bureaucracy, and simply enjoy client delivery and their software then this role could be for you.

Key Responsibilities include:

- Build and grow our sustainable engineering capability and process maturity
- Taking ownership of technical issues, complex technical problem identification and resolution across full stack including infrastructure
- Full stack functional enhancements and feature development, sometimes cutting code on 'micro' project for clients
- Technical design and mentorship of team members
- Enable clients to take ownership of the solution themselves (sharedo is a platform)
- Managing the delivery of updates and enhancements to our clients live systems including dev ops
- Establishing and promoting best practice processes
- Lead by example, become a "go to" engineer
- Contribute to the shaping of product roadmaps

We take the success of our customers incredibly seriously. We feel their joy. We feel their pain. Are you up for the challenge?

The Tech

Technology wise we are a ".NET shop", but not a stodgy, stereotypical, Microsoft Kool-Aid kind of ".NET shop".

We embrace solutions such as Nancy, GetEventStore, RabbitMQ, KnockoutJS and PetaPoco (to name a few) and hence we expect candidates to have a solid knowledge of "Microsoft-land", but also a strong interest in Open Source and these alternative solutions – you may not have commercial experience building with these but if you're the kind of person that loves to learn, and strives for self-improvement, then that's the kind of person we're looking for – if you can also show us some Open Source contributions that would also earn you some serious Brownie Points.

As a minimum we would expect you to have the following technical skills:

- .NET Framework (strong)
- JavaScript / CSS / HTML (fair ++)
- SQL (strong)
- C# (strong)

Attitude wise we expect opinions but not egos, and at this level you should understand that the customer solution comes first, and shipping software is often the most important, and most often overlooked feature.

You will be based predominantly at our offices in Altrincham, Cheshire and with a flexible home working policy. There may be occasional visits to our client sites, but we you certainly won't be a "road warrior"!

If you've gotten this far and are still thinking "this is me!" then please drop us a line – slicedbread is the kind of place the awesome people like you deserve to work!

THE FUTURE AND Compensation
We want someone to join us on a journey, someone who is up for the challenge of not only delivering great client experiences but in building the team of engineers to enable this.

We are growing rapidly and with this there is an opportunity for you to grow and shape the role as you see fit.

At slicedbread we don't force people down a "management" track to further their career if that is not what you desire; we reward the best.
